

eDiscovery Solutions

Lightspeed's eDiscovery & Forensic services

LightSpeed is a full-service team of discovery experts specializing in providing top-quality litigation support services to leading law firms and organizations.

Our team's technical expertise in eDiscovery, digital forensics, data analytics, conceptual search technology, web-based review tools, and best practices ensure proper process and cost containment for law firms and corporations nationally.

eDiscovery & Early Case Assessment (ECA)

Most of our professionals have over 10 years of hands-on data processing and project management experience and are experts at dealing with complex and emerging data types.

Our comprehensive discovery process identifies and extracts thousands of documents per minute while identifying important documents and defensibly excluding the rest.

- Secure and scalable Relativity hosting environments, ISO 27001 certified and HIPAA Compliant with 24-hour support
- Capable of processing 1 Terabyte per day into ECA review
- Review and search Mobile chat messages & emerging chat applications

Digital Forensics

Our forensic professionals help organizations through the discovery process by leveraging the best industry solutions to defensibly collect evidence and uncover events that provide insights that could determine the best course of action throughout the litigation or investigation.

- Certified professionals with over 20 years of IT expertise supporting top AM LAW 100 firms and Fortune 500 companies.
- Defensible methodologies and forensic data captures from physical devices and cloud data sources

Privacy Protection & Analysis
Project Management

Paper Discovery & Trial Support

Our teams work regularly with clients to digitize physical files for the purpose of eDiscovery. This team is also responsible for creating and presenting high-quality, professional visuals that are fundamental to today's court proceedings.

- Experts at developing visuals including video, animation, still images, charts and graphs
- 24/7 Operations and trusted partner for law firm attorneys seeking to make an impact on an audience

Privacy Protection & Personally Identifiable Information (PII) Detection

LightSpeed clients benefit from fast and defensible analytic solutions available across all phases of discovery at no additional charge.

Analytics can be used to identify outliers and patterns for the purposes of Cyber breaches, incident response, investigations, compliance or litigation. Our experts are well versed in Forensics and data privacy regulations and can recommend solutions that can quickly identify personal information for remediation.

- Clients are presented with tools and guidance to identify responsive PII documents
- Natural language entity extraction allows reviewers to confidently search for people, organizations social security, banking information, and personal data.
- Automated alerts and reporting in Relativity enables case teams to take action sooner

Project Management

Our strategic project management team provides clients with knowledge and expertise to identify and prioritize the most relevant documents in addition to providing a deeper contextual understanding of the data populations. They are the main point of contact and technical advisors to help you optimize, on-board and complete your engagement.

- Clients are provided with transparent proven workflows and technology assistance to search and produce responsive data in a cost-effective manner
- Our professionals will provide you with a fully customizable experience tailored to the needs of your individual case. We will provide recommendations and support Technology-assisted solutions including Brainspace, Next LP, Ayfie, and Relativity Analytics on Demand

Lightspeed is committed to helping clients identify facts and locate Personal Identifiable Information

When collecting information in the discovery process—whether electronically or via paper records— organizations must make sure to comply with all applicable rules and regulations, especially those that deal with the sometimes thorny issue of privacy. No matter where they are generated, whether it's at the state, federal or even continental level, it's unreasonable to expect a layperson to understand, or even be aware of, the multitude of these regulations. You should expect nothing less from your eDiscovery partner, which is why LightSpeed remains constantly vigilant, staying current on the ever-shifting legal landscape, to ensure our clients are always on a solid, defensible legal footing.

The screenshot displays the Lightspeed eDiscovery interface with a search for '20190820_Analyt...'. The results are organized into three main sections:

- Who:** A table titled 'Count of LS - Person' showing counts for individuals like Philip K. Allen (707), Philip Allen (69), Keith Holst (59), Mike Grngby (51), Ina Rangel (42), and John J. Lavorato (38).
- Where:** A table titled 'Count of LS - Location' showing counts for various locations such as United States (965), California (33), San Marcos (23), Houston (20), Texas (16), and Chicago (10).
- What:** A table titled 'Count of LS - Term' showing counts for terms like Data Set (662), west desk (19), Insurance Company (12), site plan (12), address book (9), and Distribution Groups (9).

At the bottom, a 'List' view shows a table with columns for Custodian, BegDoc, BegAttach, Attachment IDs, Record Type, DocDate, Title, From, To, and CC. A sample row shows an email from Philip K. Allen to Naomi Johnston.

Storyboard: Lightspeed’s Integrated Relativity solution

All of Lightspeed’s Relativity clients are presented insights and dashboards powered by Ayfie’s linguistic analytics engine and Lightspeed’s algorithms. Storyboard is one of the newest and most powerful developments in the analytics and eDiscovery front.

These insights can be used to quickly tell a story, identify impacted individuals, and report information across a variety of use cases from data breaches, investigations, and compliance.

When

Investigators and reviewers are presented with a timeline and a summary of identified PII patterns allowing them to narrow down and prioritize their review.

PII values

Reviewers can now analyze the PII values in the coding pane and no longer need to search through the documents to extract or record values.

The screenshot displays a software interface for reviewing PII values. On the left, a table lists individual records with columns for ID, gender, birthdate, maiden name, lname, fname, address, city, state, and zip. On the right, a 'Metadata' pane shows details for a document named 'REV_00000001', including PII types like CREDITCARD_NB, EMAIL, and PHONE, along with their corresponding values.
